

# Horizon Haemmerlin Debris Chute System

Proven  
Technology  
from

Construction sites are always prone to accidents, dirt and unsafe working conditions. During construction debris is generated. Disposal of this construction waste is nightmare for Project Engineers. Lots of accidents happen due to this and most of them are fatal.

Human life is invaluable and occurrence of these accidents may lead to huge financial, legal liabilities and site schedule can go haywire. This loss is immense.

Some of the problems associated with unsafe disposal of debris are as follows:

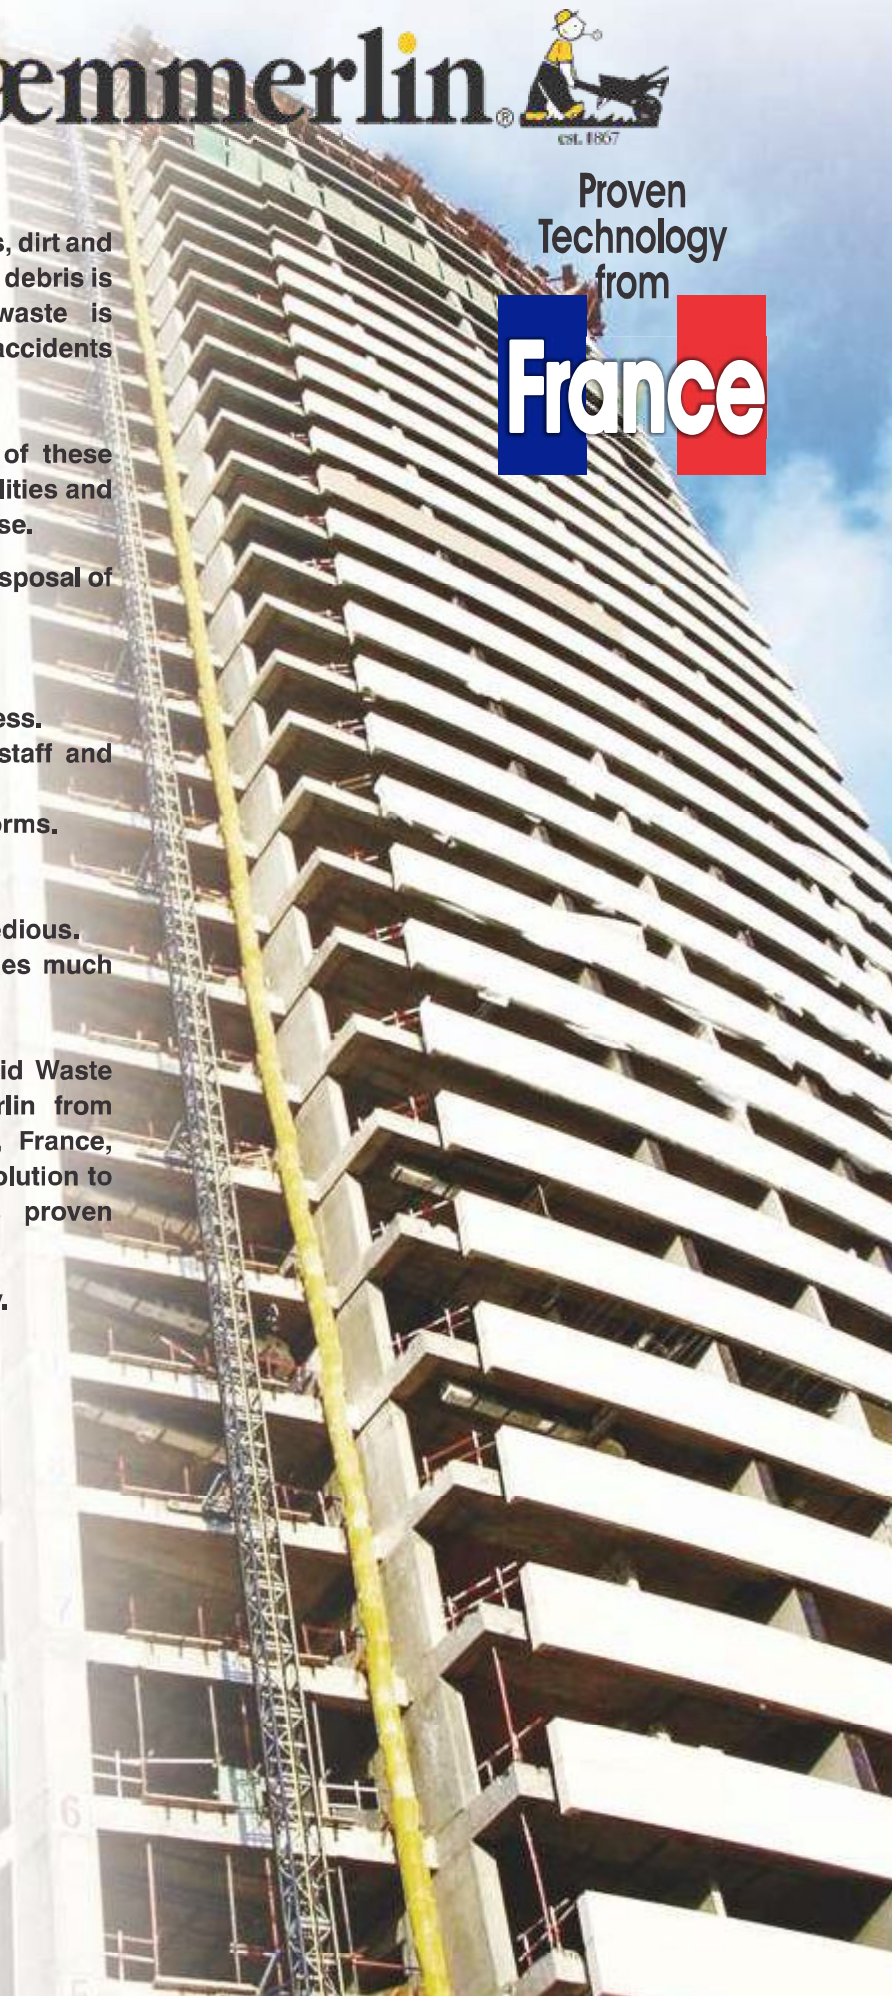

- Accidents, mostly fatal accidents.
- Huge Financial and legal liabilities.
- Direct impact on site schedule and work progress.
- Unsafe working environment for workmen, staff and visitors.
- Deviation from latest OSHAS and ISO 14000 norms.
- High dust and noise levels.
- More manpower for debris disposal.
- Cleaning of ducts used for debris disposal is tedious.
- In densely populated areas this task becomes much more difficult.

Horizon Chutes, a leading organisation in Solid Waste Handling, have joined hands with Haemmerlin from France. Horizon is representing Haemmerlin, France, which is 150 years old company, for offering solution to Debris disposal problem. This solution is proven worldwide for tall towers.

Now disposal of Debris is SAFE and User friendly.

**Salient features :**

- Poly propylene co polymer injection molded.
- Reusable for next site.
- High impact strength and ware resistance.
- Light weight.
- UV Rays protected.
- Ease of Installation and Dismantling.
- Very low dust and noise levels.
- Reduces manpower.
- Installation and operating cost is lower.
- Less Storage and Transport volumes.
- User friendly product.
